

Seven-Step Checklist for Protecting Electrical Assets

In a crisis, demand for highly skilled service technicians and engineers can spike. Here's our top seven steps facility managers can use to stay ahead of emergency electrical needs.

Ensure alternative support for when your electrical maintenance staff are unavailable.

Accomplish key maintenance while buildings are unoccupied or in partial use.

Verify a current safety plan is in place per NFPA-70E.

Ensure that your emergency backup systems are operational.

Check your inventory plan and electrical distribution parts on hand.

Verify an emergency power service agreement is in place.

Complete visual inspection and infrared scanning to identify potential failures.

Avoid issues with skilled labor scarcity. Plan to be proactive today.
